

VISION

Many Organization have been working towards adequate female sanitation facilities and better awareness and understanding of menstruation. So taking all the points into consideration we have come up with an appropriate solution for this problem is to burn the sanitary napkin and convert it into ash, which is safe and biodegradable option to dispose used sanitary napkins

MISSION

To design a convenient and safe method to destroy napkins in a scientific and hygienic way which helps to maintain a pollution free environment

ABOUT US

- ⇒ We are one of the leading manufacturers & suppliers of Sanitary Napkin Burner in the field of waste management disposal.
- ⇒ We are concerned to do our part to make environment more cleaner and breathable for the generations, we are having wide variety of Sanitary Napkin Burner.
- ⇒ Our Sanitary Napkin Burner are designed & developed with cutting edge technology and reliable to perform best as well as safe in all given scenarios.
- ⇒ Sanitary Napkin Burner is the scientific and hygienic way for disposal need of used sanitary pads where napkin gets converted into sterile ash.

AT PUBERTY

Large number of girls are in secondary education when they begin menstruating and more that 70% of them use an old cloth which is re used. Such kind of unhygienic methods can cause reproductive tract infections compared to those who use sanitary napkins.

One major cause of unawareness about hygienic safety during menstruation is that it is considered as social taboo and they are not open to discuss problems freely.

Large number of girls drop out of schools when they begin menstruating in rural area. Even in urban they feel more conscious about it & inconvenient about disposing soiled sanitary napkin

HAZARDS

Disposable sanitary napkins today have a high content of LDPE plastic polymers and a layer made out of polyacrylate, polyacrylate layer is a super absorbent gel, which causes cancer in Uterus & bladder if not changed every 5 hours

METHOD'S OF DISPOSING

USING SNAPBURN

Adding this simple "sanitary pad disposal unit" as a feminine hygiene sanitary product in the toilets of the work place will help the girls to feel comfort, stress free, more conscious for the work & relaxed attention in their work during menstruation period. This will increase the efficiency of her work

Conventional Method

In certain scenario, they wrap it in plastic bag and drop it in bathroom, dustbin and flush them in the drain which causes clogging in drainage system and dropping it in dustbin may result in health related issues. If flushing it continues to bloat as it makes its way through the underground rivers and clogs up the sewers leading conservancy workers to dive down and remove them by hand.

snapburn

FEATURES

- ⇒ Our model with Primary & Secondary Combustion chamber.
- ⇒ No external heat and noise, Easy to operate.
- ⇒ High Temperature, long lifetime of incinerator.
- ⇒ Manual or Automatic Burners
- ⇒ Natural Scrubber and Waste Scrubber for scrubbing flue gases
- ⇒ Exhaust pipe installed with self-supported or guy rope supported or tower supported as per the requirement
